WHERE TO USE

Maplex AC4 is used for:
- Sealing expansion and compression joints subjected to medium-scale movements.
- Forming a flexible seal between building components.

Some application examples
- Seal joints between precast concrete panels with movement up to 10%.
- Seals between prefabricated panels in concrete, wood and gypsum board.
- Seals between elements in concrete, plaster, brickwork, light-weight cement, wood, natural stone, etc.
- Airtight and waterproof seals between wooden frames and masonry.
- Flexible seals between doors, roller-blind caissons and masonry, and between walls, ceilings, wooden panels and insulation panels.
- Sealing joints between insulation panels and external building features (doorsteps, windows, window-sills, cornices, etc.) in thermal cladding systems.

TECHNICAL CHARACTERISTICS

Maplex AC4 is a one-component product based on acrylic resins dispersed in water and is a thixotropic paste that is easy to apply on both horizontal and vertical surfaces.

Maplex AC4 seals remain unaltered even after many years of exposure to severe weather conditions, industrial environments and thermal gradients. They remain flexible in temperatures as low as –30°C and resist temperatures up to +80°C (+100°C for short periods).

Their resistance to chemical agents (for diluted acids and alkalis only) is good.

However, given the large number of products and operating conditions, it is best to carry out a few tests before using Maplex AC4.

Its resistance to water is good as long as it is not permanently immersed.

Maplex AC4 can be painted with ordinary wall paints.

Adhesion

Maplex AC4 adheres to all porous surfaces, such as concrete, wood, gypsum, plaster, brickwork, light-weight concrete and natural stone.

Adhesion is assured even when the surfaces are damp (but not wet).

If Maplex AC4 is to be used for a heavy-duty seal, it is best to apply a coat of primer (Maplex AC4...
diluted with water) to the sides of the joint and then complete the seal within the next 2 hours approximately.

**RECOMMENDATIONS**
- Do not use Mapeflex AC4 for expansion joints with movement greater than 10% (use Mapesil BM).
- Do not use Mapeflex AC4 for seals that must remain in continuous water immersion (use Mapesil AC).
- Do not use Mapeflex AC4 on metal surfaces and non-absorbent materials (use Mapesil BM or Mapeflex GB1).
- Do not use Mapeflex AC4 for joints subject to foot traffic (use Mapeflex PU30 or Mapeflex PU20).

- Do not use Mapeflex AC4 if there is a possibility of rising damp.
- Do not apply Mapeflex AC4 at temperatures lower than +5°C or where frost is forecast.

**APPLICATION PROCEDURE**
Preparing and sizing the joint
All surfaces to be sealed must be sound, free of dust and crumbling parts, oils, grease and old paint.

If the sealant is to perform correctly, it must be allowed to elongate and compress freely after application to the joint. It is therefore necessary:
- that it adheres perfectly to the side walls of the joint and not to the bottom;

• that the width of the joint is assessed correctly so that its length in operation is not in excess of 10% of the initial width calculated at +23°C;

• that the thickness of the Mapeflex AC4 joint is always less than or, at the most, equal to the width.

To adjust the depth and make sure that Mapeflex AC4 does not adhere to the bottom, it is necessary to apply special filling materials, polyethylene foam or similar, such as Mapefoam.

Using the sealant
Mapeflex AC4 is supplied in 310 ml cartridges and 25 kg buckets.

To use the cartridge, cut off at the top of the thread, screw on the nozzle, cutting a 45° opening according to the size of the joint, insert the cartridge into the pistol and extrude.

To use Mapeflex AC4 from the bucket, the proper tools must be employed.

Finishing must be carried out with a damp tool before a surface-film forms.

Cleaning
Mapeflex AC4 can be cleaned from tools and surfaces with water. When it has completely cross-linked, water and mechanical action must be used.

Hardening
Mapeflex AC4 becomes flexible through water evaporation. The time required depends on ambient temperature and humidity. A thickness of 3-5 mm needs 24 hours to harden completely at +23°C and 50% R.H.

Higher temperatures accelerate the process while greater thicknesses require more time.

Mapeflex AC4 must be protected from washout at least during the first 24 hours after application.

CONSUMPTION
Consumption depends on the size of the joint:

- for a 5x5 mm joint one cartridge will cover approx. 12 m;
- for a 10x5 mm joint one cartridge will cover approx. 6 m;
- for a 10x10 mm joint one cartridge will cover approx. 3 m.

PACKAGING
Mapeflex AC4 is available in 310 ml cartridges and 25 kg buckets in white and in grey.

STORAGE
Mapeflex AC4 is stable for 24 months if stored in a cool, dry place. Protect from frost.

SAFETY INSTRUCTIONS FOR PREPARATION AND APPLICATION
Mapeflex AC4 is not considered as dangerous according to the European regulation regarding the classification of preparations. It is however recommended to use gloves, eyes protection and to take the usual precautions taken when handling chemical products. The Safety Data Sheet is available upon request for professional users.

PRODUCT FOR PROFESSIONAL USE.

WARNING
Although the technical details and recommendations contained in this report correspond to the best of our knowledge and experience, all the above information must, in every case, be taken as merely indicative and subject to confirmation after long-term practical applications. For this reason, anyone who intends to use the product must ensure beforehand that it is suitable for the envisaged application. In every case, the user alone is fully responsible for any consequences deriving from use of the product.
